make a difference.™

Together we can
make a difference.™

What is an electric vehicle (EV)?

Electric vehicles power themselves from energy drawn from a rechargeable battery they carry onboard, and not from using petrol. That means they produce no tailpipe emissions.

Better still, when powered by 100% renewable energy, they produce no greenhouse gas emissions – making them a cleaner, more sustainable transport option.

To gear up for this brighter driving future, we're providing Australians with safe, reliable and easy to use 'smart' charging solutions.

Why use the Origin ChargePoint Charging Solution?

Our technology¹ is an integrated end-to-end electric vehicle charging solution, backed by:

- A fully compliant and certified product suite²
- Integrated hardware and 100% GreenPower energy options
- Proven technology, with over 1,000 installations across North America, Europe and the UK
- Availability for rapid installation³
- Access to the wider Origin electric vehicle charging network

What are the benefits of a networked electric vehicle charging solution?

An Origin ChargePoint Charging Solution allows you to operate your electric vehicle in a secure, sophisticated way.

- RFID Secure User Authentication
- Driver Assist and Network Operations Management, 24/7
- Real-time charging station availability via the internet
- Access to usage data through customised web-based portals
- Automatic notifications of charging status via SMS or email
- Summaries of reductions in greenhouse emissions
