

## Previous Feed-in Tariffs

### ACT Electricity Feed-in Tariff Scheme – various feed-in tariff rates

The Electricity Feed-In Tariff Scheme in the Australian Capital Territory (ACT) commenced on 1 March 2009 and closed on 13 July 2011 and provides customers with eligible wind or solar electricity generation systems with various feed-in tariff rates (c/kWh).\*

The key eligibility criteria for this scheme relates to the system size and date that an application was made. Customers must also have gross metering. If you're an eligible customer, you can expect to remain on this scheme for 20 years from the date your application was received.

Key eligibility criteria:

- If you have a system installation date between 1 March 2009 and 30 June 2010, and have a system size of up to 10kW, you can expect to receive a total feed-in tariff of 50.05c/kWh.
- If you have a system installation date between 1 March 2009 and 30 June 2010, and have a system size greater than 10kW and less than or equal to 30kW, you can expect to receive a total feed-in tariff of 40.04c/kWh.
- If you have a system installation date between 1 July 2010 and 31 May 2011, and have a system size up to 30kW inclusive, you can expect to receive a total feed-in tariff of 45.70c/kWh.
- If you have a system installation date between 7 March 2011 and 11 July 2011 and have a system greater than 30kW and less than or equal to 200kW, you can expect to receive a total feed-in tariff of 34.27c/kWh.
- If you have a system installation date between 12 July 2011 and 13 July 2011 and have a system less than or equal to 200kW, you can expect to receive a total feed-in tariff of 30.16c/kWh.

### What's the difference between gross and net metering?

Gross metering means all energy produced by the generation source is exported to the grid. Net metering means energy produced by the generation source is firstly used by the property where the system is installed, with any excess exported to the electricity grid.

### Upgrading a solar or wind electricity system

Customers are unable to upgrade their wind or solar electricity system under this scheme.

**Customer move in:** If a property with an eligible installation is sold (and the installation remains in place), the new electricity account holder for the property should be entitled to the same feed-in tariff rate for the remaining portion of the original 20 year term.
