Australia Pacific LNG commences LNG production

Origin Energy Limited (Origin) today confirmed that downstream operator ConocoPhillips has advised that Australia Pacific LNG has commenced production of liquefied natural gas (LNG) at its Curtis Island facility. Australia Pacific LNG remains on track to export its first cargo by the end of the year.

Origin Chief Executive Officer Integrated Gas, David Baldwin said, "With first LNG production, Australia Pacific LNG has now achieved its last major milestone prior to exporting LNG to customers in Asia.

"The Origin-operated upstream activities which deliver gas to Curtis Island are fully operational and performing well, and Origin, together with partners ConocoPhillips and Sinopec, are now focused on achieving first export.

"More than seven years of activity, 15,000 workers, as well as the support of many landowners in the Surat and Bowen basins, have helped Australia Pacific LNG reach this important point in its history," Mr Baldwin said.

Australia Pacific LNG produces natural gas from Australia's largest 2P CSG reserves base located in the Surat and Bowen basins in Queensland, which is piped to its LNG facility on Curtis Island where it is converted to LNG for export to customers in Asia.

About Origin Energy

Origin Energy (ASX: ORG) is the leading Australian integrated energy company with market leading positions in energy retailing (approximately 4.3 million customers), power generation (approximately 6,000 MW of capacity owned and contracted) and natural gas production (1,093 PJ of 2P reserves and annual production of 82 PJ). To match its leadership in the supply of green energy, Origin also aspires to be the number one renewables company in Australia.

Through Australia Pacific LNG, its incorporated joint venture with ConocoPhillips and Sinopec, Origin is developing Australia's biggest CSG to LNG project based on the country's largest 2P CSG reserves base.
